FIG. 8

**FIG. 9**

FIG. 9 is a schematic diagram of an optical system. A light beam, represented by a dashed line with arrows, enters from the left. It passes through a hexagonal component 5, which has a central point 'x' and a curved arrow indicating rotation. The beam then passes through a series of components: a rectangular element 2, a rectangular element 4, and a rectangular element 3. These are followed by two curved, lens-like elements 6a and 6b. The beam then passes through a vertical line 7 and finally through a vertical line with an upward arrow labeled 'B'. A dashed line 1b is shown above the beam path, and a bracket 1a is shown below it. A bracket 8 is shown above the beam path, and a bracket 5a is shown below it. A bracket 6 is shown below the lens elements 6a and 6b.

FIG. 10

Diagram illustrating an optical system. A light source 5 (a hexagon with an 'x') emits a beam through a series of components: a lens 3, a component 4, and a lens 2. The beam is split into two paths: one through a component 1a and another through a component 1b. The beams are then focused by a lens 6 (consisting of parts 6a and 6b) onto a vertical line. Labels include 1a, 1b, 2, 3, 4, 5, 5a, 6, 6a, 6b, and 8. Text labels indicate "LIGHT BEAM FROM LIGHT EMITTING PORTION 1a" and "LIGHT BEAM FROM LIGHT EMITTING PORTION 1b".
